- Portfolio

EDUCATION

- Software Engineering
- ESPRIT 2022 - 2025
- Physics & Chemistry
- Preparatory Studies
- IPEIT 2019-2022

CORE SKILLS

- Requirements analysis & functional specification design
- Business process & workflow modeling
- Full-stack system design and implementation
- User acceptance testing (UAT) support
- Translating business needs into technical solutions

TECHNICAL STACK

- Frontend: Angular, React
- Backend: Django, Spring Boot, NestJS
- Languages: Java, TypeScript, Python, C/C++
- Databases: PostgreSQL, MySQL
- DevOps & Tools: Linux, Docker, Jenkins, GitHub, UML
- AI & Data: Machine Learning basics, Deep Learning (YOLO), Power BI

LANGUAGES

- English (B2)
- French (B2)
- Spanish (Basic)

Full-Stack Engineer | Systems & Product Builder

Software Engineer focused on full-stack development and data-driven systems. Experienced in building web applications using Angular, Django, and Spring Boot, with a strong interest in system design, functional analysis, and workflow optimization. I enjoy transforming complex requirements into scalable and structured software solutions.

EXPERIENCE

- End-of-Studies Project – Medico International Services (2025)
- AI-POWERED MEDICAL WEB PLATFORM – DJANGO, ANGULAR, DEEP LEARNING
- Engineered a full-stack medical platform using Django and Angular, designed to support clinical workflows and AI-assisted image analysis.
- Designed backend architecture and REST APIs for scalable system communication.
- Developed real-time features using WebSockets to enhance user interaction.
- Integrated a YOLO-based deep learning model for prosthesis image analysis.
- Collaborated with end users to refine functional requirements and validate features.

Software Engineering Intern – IC CANADA (2024)

- BI & ERP Platform Development
- Worked on the design and development of a Business Intelligence and ERP platform focused on data visualization, reporting, and workflow optimization.
- Analyzed business requirements and translated them into functional system designs.
- Developed BI dashboards with filtering, aggregation, and reporting capabilities.
- Designed relational database schemas and optimized SQL queries for performance.
- Contributed to workflow-based ERP modules aligned with business operations.

PROJECTS

- Colocation & Carpooling Platform – ESPRIT
- Spring Boot, Angular
- Built a full-stack matching platform with REST APIs and Angular frontend for real-time user interaction. Implemented authentication and core business logic for matching workflows.
- Customer Center & Stock Management System – ESPRIT
- Java, JavaFX, Symphony
- Developed a desktop CRM and stock management system with structured data handling and user workflow design for operational use cases.
- DevOps & QA Automation Pipeline – ESPRIT (2025)
- Implemented a CI/CD pipeline using Jenkins, GitHub, and Docker. Integrated automated code quality checks (SonarQube) and API testing (Postman/Swagger). Deployed and monitored containerized applications using Docker, Prometheus, and Grafana.
