Education

2022 - 2025

Software Engineering

ESPRIT

2019-2022

**Physics & Chemistry
Preparatory Studies**

IPEIT

CORE SKILLS

- Resource Management
- Creativity
- Negotiation
- Critical Thinking
- Leadership
- Agile / Scrum
- API Design

TECHNICAL STACK

- **Frameworks:** Angular ,Django, Spring Boot, React/NestJS
- **Languages:** Java , Typescript ,.NET , Python , C/C++
- **AI & Data:** ML , DL, Power BI
- **Databases:** MySQL ,SQL , PostgreSQL
- **Tools & DevOps:** Linux, Jenkins, Docker, DockerHub, Nexus, SonarQube, Prometheus, Grafana, UML, FlutterFlow

Languages

English (B2)

French (B2)

Spanish (Basic)

Nidhal Dalhoumi

Front-End Angular Developer | Full-Stack Engineer

Front-End Developer with strong experience in Angular and full-stack development using Django. Experienced in building modern, scalable web interfaces, integrating REST APIs, and delivering reliable features in Agile environments. Focused on clean UI architecture, reusable components, and code quality.

Experience

- **End of studies Project – Medico International Services | 2025**
AI-Powered Medical Web Platform – Django, Angular, Deep Learning
 - Engineered a full-stack medical platform using Django and Angular.
 - Designed scalable backend APIs and structured application architecture.
 - Implemented real-time communication using WebSockets.
 - Integrated a YOLO deep learning model to analyze prosthesis images.
 - Delivered clinical decision-support features to assist healthcare professionals.
- **IC CANADA –Software Engineering Intern | 2024**
BI Management Platform – Django & Angular
 - Built a full-stack business intelligence management application using relational databases (MySQL/PostgreSQL) and structured SQL queries.
 - Designed modular low-code workflow configuration modules aligned with enterprise resource planning (ERP) system architecture.
 - Developed interactive dashboards with advanced filtering, data aggregation, and reporting features for enterprise decision-making.
 - Modeled normalized database schemas to ensure scalability, data integrity, and maintainable backend architecture.

Projects

- **Colocation & Carpooling Matching Platform – ESPRIT |**
Spring Boot & Angular
 - Designed a platform for housing and ride-sharing matching.
 - Developed intelligent matching algorithms to optimize results.
 - Implemented security mechanisms and user profile verification.
- **Customer center & stock management Platform – ESPRIT |**
Java & Java FX , Symfony
 - Built a desktop application for customer relationship management.
 - Implemented stock management and customer center modules.
- **DevOps & QA Automation Project – ESPRIT | 2025**
 - Built and executed a CI/CD pipeline with Jenkins, integrated with GitHub and Docker.
 - Performed automated code quality analysis using SonarQube and API testing with Postman / Swagger.
 - Deployed and monitored containerized applications using Docker, Prometheus, and Grafana.

Leadership & Activities

DeepFlow Club –Chairman | 2023 – 2024

- Organized and delivered “AI for All”, supervising machine learning workshops for students.
- Led the AI HackFlow 2.0 event at the City of Sciences Tunis, coordinating speakers and participants.

Tunivisions IPEIT Club – Chairman | 2021 – 2022

- Built and strengthened community engagement through innovative technical events.
- Organized “Road to 5.0”, a conference series combining Industry 5.0, Artificial Intelligence, and Robotics.
